

Fact Sheet

By 2020, it's estimated that 30,000 US schools will no longer offer any after school or extracurricular classroom programs at all. This is due to billions in budget cuts. Everywhere, with no end in sight.

Until Now. We fixed it: Using kindredSun™'s patent pending community solar revenue sharing business method, together we can easily pay the costs of these programs and much more. Indefinitely, maybe forever.

Why? Our future depends on us being good stewards of our environment. Green energy can only go so far if we don't teach our young people the part about being good stewards. **It's simple: Good kids = Good adults = Good stewards.**

1. They only get to be kids once, they shouldn't have to "pay to play."
2. Our youth's physical and mental health today affects the quality of the society they will live in, and their kids will grow up in tomorrow.
3. These programs teach invaluable "intangible" lessons and life skills that emphasize a little less "me" and a little more "us" that will make the world a better place for everyone.

Our challenge is to provide this program to **50 Million Families attending 98,000 US schools.** We can't do this alone.

Please visit www.kindredSun.com/petition and submit your personal petition to help your community qualify faster for Priority Project Funding. Your tax deductible donation to the kindredSun Foundation-School Pilot Fund will help pay for basic essential "one time" community awareness campaign advertising costs for our schools.

No One Should Have to "Pay to Play."

Sound good? It gets better.

To Serve and Protect: We created a legal platform for a structured community "opt-in" entitlement. This revenue is based on the actual measured energy produced in your community every day, not "shaky" profit sharing promises. As long as the sun comes up, the money will be there.

How does it work? We redistribute a significant portion of your own community's participating homes and businesses monthly solar power payments back to a citizen / community organization-managed endowment.

Relax. It won't cost you any more to share the sun than it ever did. Much less in many cases.

How is this possible? By leveraging community participation. Economies of scale will replace the value of the donated revenue from our solar providers and /or project funding partners.

We've done math – it's easy. As little as 2.5% of your community homes and businesses sign up. You tell us how much money you want to raise, and we will design a campaign. Simple. When your campaign ends, you continue to add new solar systems through our program.

Who pays back the government? We do. Everyday for every renewable energy subsidy dollar invested in solar we indirectly pay the subsidy back up to +/-300% in cash through public funding. That's how all government subsidies should work.

"With a little help from our friends" we can do this. Even a small one-time donation will help us "turn on" the Sun's "funding pipeline" for all of our kids, forever.

Your donation dollar never went further.

Thank you,

Rob Thatcher
